

## **PYTHON TASKS/ASSIGNMENT:**

### **USING CONDITIONAL STATEMENTS CREATE :**

1. A calculator for basic arithmetic operation, that would take input of three variables as Num1, operators (+,-,/\*) and Num2. Write condition that makes the calculator perform an operation, prints the result, depending on what operator the user input.
  
2. A Rock, Scissors, Paper game, that will take player one and player two input, either rock, scissors or paper. Now write conditional statement that determine:
  - (i) when the game is a tie,
  - (ii) when player 1 wins (this would need multiple condition using AND & OR)
  - (iii) when player 2 wins (this would need multiple condition using AND & OR)
